Pune, India – 411061 | Notice period: up to 30 days (negotiable) | Portfolio: https://lgchintake.github.io

Technical Lead | Java, Spring Boot, Microservices, Blockchain

Profile

Technical Lead with **11 years** of experience building scalable microservices and financial systems. Strong expertise in Java, Spring Boot, Kafka, blockchain, Solidity, React, and TypeScript. Experienced in technical leadership, cloud-native development, CI/CD optimization, automated testing, and designing reliable, maintainable enterprise applications.

Education

Savitribai Phule Pune University **Jul 2012 - Apr 2015**
MCA (67.20%) - Field: Computer Applications *Pune, India*

Swami Ramanand Teerth Marathwada University **Jun 2009 - May 2012**
BCA (67.90%) - Field: Computer Applications *Nanded, India*

Technical Skills

Languages: Java, Solidity, TypeScript, JavaScript, SQL, jQuery
Backend & Frameworks: Spring Boot, Spring Batch, Spring Data JPA, Spring Cloud Config, Hibernate, RESTful Web Services, Microservices, Event-Driven Architecture, Node.js, Express
Frontend: React, HTML
Blockchain: Ethereum, Solidity, Hardhat, Web3, Ethers.js, OpenZeppelin, Smart Contracts
Messaging & Databases: Apache Kafka, Redis, Oracle, PostgreSQL, MongoDB, MongoDB Atlas
Cloud & DevOps: AWS, Docker, Kubernetes, Red Hat OpenShift, Jenkins, CI/CD, HashiCorp Vault, Git, GitHub, Maven, Gradle
Testing & Quality: JUnit, Mockito, Cucumber (BDD), Pitest, SonarQube, Coverity, MEND, Postman, Swagger
Practices: Agile, Code Review, Technical Documentation, Security & Compliance Audits
AI Tools: Anthropic Claude, GitHub Copilot, OpenAI API

Professional Experience

Opus Technologies | Technical Lead | Pune, India **Sep 2019 - Present**

- Led a team of **7 developers** delivering the **Debit Card Management System** and **card tokenization services**, from requirements through production releases.
- Designed **event-driven microservices** on Java, Spring Boot, Oracle and PostgreSQL, processing **2.5 million** records per day.
- Enforced **code quality** through peer reviews and automated SonarQube, Coverity and MEND scans, maintaining minimum **90% test coverage** and reducing critical findings by **40%**.
- Led security and compliance audits with external auditors, closing **440 findings** before the deadline.
- Mentored **6 developers** on design, testing and delivery practices, cutting review turnaround and defect rate by **30%**.

Nexant India Pvt. Ltd | Software Developer | Pune, India **Oct 2018 - Sep 2019**

- Developed Java and RESTful web services with ExtJS front ends for power grid operations applications serving US and UK utilities.
- Built customer loyalty program features, increasing engagement and retention by **5%**.
- Implemented data-driven features that let energy companies analyze consumption patterns and generate predictive models.
- Tested and tuned application performance, reducing response times by **9%**.

Attra Infotech Pvt. Ltd | Senior Software Engineer | Pune, India **Jan 2018 - Oct 2018**

- Built secure backend APIs in Java, serving **1M users** and handling **37M requests** per day.
- Developed and integrated Jasper Reports, replacing manual reporting steps with automated output.
- Reviewed code and **mentored 5 team members** to keep delivery on schedule.

Lexicon Networks India Pvt. Ltd | Software Engineer | Pune, India **Aug 2015 - Jan 2018**

- Built full-stack web applications using Java, Spring Boot and Hibernate for FMCG and education domain.
- Developed hybrid mobile apps with Ionic and Cordova for cross-platform use.
- Gathered requirements from stakeholders and delivered features and system updates across the project lifecycle.

Projects

Bond Tokenization Platform (Blockchain) | Opus Technologies **Jun 2026 - Present**

Built a blockchain-based bond tokenization platform that lets custodians tokenize off-chain bonds on Ethereum and automate corporate actions such as coupon distribution, with investor whitelisting, token distribution, peer-to-peer trading and an investor dashboard.

Tech Stack: Solidity, Hardhat, Web3, Ethereum, React, Java 21, Spring Boot 3.x, Spring Data JPA, Redis, Kafka, Spring Cloud Config, Service Discovery

Key Responsibilities:

- Wrote and deployed Solidity smart contracts for bond tokenization, investor whitelisting and restricted token transfers, tested with Hardhat.
- Implemented scheduled coupon distribution to token holders.
- Integrated the smart contracts with Java backend services via Web3.
- Built Spring Boot microservices with Spring Data JPA and Redis caching, using Spring Cloud Config and service discovery.
- Used Kafka for event-driven workflows such as stakeholder notifications.
- Built a React front end for portfolio tracking and holdings visualization.

Digital Modernization | Opus Technologies — Jan 2026 - Oct 2026

Developed Spring Boot microservices for a card tokenization platform, including the Account Profile and Token Lookup services, integrated with downstream systems over Kafka.

Tech Stack: Java 17, Spring Boot, Microservices, Kafka, JUnit 5, Mockito, Cucumber, Pitest, Jenkins, Red Hat OpenShift (OCP)

Core Responsibilities:

- Built Account Profile and Token Lookup microservices for secure retrieval and delivery of tokenized card data.
- Implemented Kafka-based asynchronous messaging for real-time data exchange between services.
- Wrote unit tests with JUnit 5 and Mockito, API tests with Cucumber (BDD), and integration tests for end-to-end validation.
- Used Pitest mutation testing to find gaps in test coverage and strengthen assertions.
- Deployed containerized services to Red Hat OpenShift (OCP) and maintained Jenkins CI/CD pipelines.

Certificate of Deposit Platform | Opus Technologies — Aug 2025 - Dec 2025

Built a blockchain-based **Certificate of Deposit (CD) platform** that lets issuers create tokenized CDs and lets users subscribe with **eRupee**, with maturity-time burn and on-chain events keeping off-chain records in sync. Treasury operations are governed **by Safe (Gnosis)** 3-of-5 **multisig** approval, and the platform includes role-based access control, secrets management with HashiCorp Vault, and **AI-assisted** risk analysis for governance and treasury officers.

Tech Stack: Solidity, Hardhat, OpenZeppelin (UUPS upgradeable proxies), Ethers.js v6, Safe (Gnosis) Protocol Kit and API Kit, Node.js, Express 5, TypeScript, MongoDB/Mongoose, HashiCorp Vault, Docker, OpenAI API (function calling), React 19, JWT, Ethereum Sepolia

Core Responsibilities:

- **Built a tokenized Certificate of Deposit** smart contract where users can subscribe with **eRupee** through approve/transferFrom, plus issuer-side CD creation and burn on maturity. On-chain events keep the off-chain records in sync.
- Put the treasury behind **Safe (Gnosis) multisig governance** with 3-of-5 approval. The backend proposes mint transactions through **Safe API Kit**, collects signer confirmations, and executes automatically once quorum is reached.
- Built a **TypeScript/Express** backend with about **50 REST endpoints** across **13 feature** modules (auth, wallet, conversion, transfers, CDs, multisig, alerts, notifications and others). Data is stored in MongoDB in 18 Mongoose models.
- Moved all secrets (database URL, JWT secret, SMTP, API keys) out of the code into **HashiCorp Vault**, run with Docker. Sensitive database fields, such as wallet private keys, are encrypted with **AES-256-GCM**.
- Added JWT authentication with refresh tokens and **RBAC for 7 roles** (User, Admin, Governance, Treasury, Compliance, Security, Upgrade). Every login attempt is recorded with the user's IP address.
- Added an **AI risk-analysis feature** for governance and treasury officers using **OpenAI**. It looks at each user's transaction history, account age and behavior patterns, and returns a structured risk score (0–100), **risk level, risk factors** and points to consider, without ever making the approve/reject decision itself.
- Built an AI chatbot that uses tool calling: the model can fetch a user's CD portfolio and the issuer's CD data live from the backend before it answers.

Debit Card Management System | Opus Technologies — Sep 2019 - Aug 2025

Designed and managed a comprehensive platform for institutional onboarding and end-to-end debit card lifecycle management. Oversaw operations including card generation, embossing file creation, data maintenance, virtual card support, and high-volume batch processing.

Tech Stack: ReactJs 19, Java 17, Spring Boot 3.x, Microservices, Kafka, Redis, Jenkins, Spring Batch, Event Driven, Oracle, PostgreSQL, Spring Data JPA, Mockito, Agile Methodology

Key Responsibilities:

- Built the institutional onboarding module and end-to-end card lifecycle workflows (issuance, activation, blocking, replacement, renewal).
- Developed Spring Batch jobs for card generation and embossing file creation, processing up to 10K cards per run.
- Implemented virtual card support and data maintenance services, integrated through Kafka events.
- Optimized Oracle and PostgreSQL queries and Redis caching, reducing batch run time from 6 hours to 40 min.
- Worked with stakeholders on requirement gathering and feature grooming in an Agile team.

Certifications

- Certified Blockchain Architect | Blockchain Council | 2026 | Credential ID: BCC-2026-CYDRSX
