Profile

Certified Blockchain Architect

Technical Lead with extensive experience in architecting and delivering scalable microservices ecosystems and complex financial systems. Expert in Java, Spring Boot, and event-driven architecture utilizing Kafka. Proven track record in blockchain integration, smart contract development with Solidity, and full-stack implementation using React and TypeScript. Demonstrated leadership in managing high-performing teams, enforcing rigorous engineering standards, and optimizing CI/CD pipelines within cloud-native environments. Adept at translating complex business requirements into robust, high-performance technical solutions across diverse sectors, including fintech and energy. Committed to maintaining code quality through automated testing, mutation testing, and strategic architectural design to ensure system reliability and long-term maintainability. I have total **11 years** of experience.

Education

Savitribai Phule Pune University **Jul 2012 – Apr 2015**
MCA (CGPA: 6.7) *Pune, India*

Swami Ramanand Teerth Marathwada University **Jun 2009 – May 2012**
BCA (CGPA: 6.7) *Nanded, India*

Technical Skills

Languages: Solidity, Java, JavaScript, TypeScript, HTML, SQL, jQuery

Frameworks: React, Spring Boot, Hibernate, Microservices, Spring Batch, Restful Web Services, Web3, NFT

Platforms: AWS, MongoDB Atlas, Blockchain

Tools: Git, GitHub, GitLab, Bitbucket, Jenkins, Docker, Kubernetes, Maven, Gradle, Postman, Swagger, IntelliJ IDEA, VS Code, JUnit, Jira, Mockito, Coverity, MEND, Sonar

Professional Experience

Opus Technologies **Sep 2019 – Present**
Technical Lead

- **Led a high-performing development team** in the design and delivery of the Debit Card Management System.
- **Collaborated with stakeholders** to gather, analyze, and translate complex business requirements into scalable technical solutions.
- **Architected and developed modular features** utilizing Microservices, significantly improving system scalability and maintainability.
- **Engineered robust backend services** using Spring Boot, integrated with Oracle and PostgreSQL databases for high-performance data management.
- **Optimized system architecture** by implementing event-driven design patterns to increase throughput and reduce latency.
- **Enforced engineering excellence** by conducting rigorous code reviews to ensure strict adherence to industry best practices.
- **Orchestrated security and compliance audits**, managing end-to-end documentation and serving as the primary technical liaison for external auditors.
- **Maintained superior code quality** through the strategic integration of automated analysis tools including Coverity, MEND, and SonarQube.
- **Provided technical leadership and mentorship**, assisting team members in resolving complex engineering challenges and accelerating project timelines.

Nexant India Pvt. Ltd **Oct 2018 – Sep 2019**
Software Developer

- **Engineered** software solutions to optimize power grid operations across the US and UK markets.
- **Developed** scalable software features for customer loyalty programs, driving user engagement and retention.
- **Architected** data-driven solutions enabling energy companies to analyze consumption patterns and generate predictive models.
- **Leveraged** Java, RESTful Web Services, and ExtJS to build and maintain high-performance web applications.
- **Collaborated** with cross-functional stakeholders to translate complex requirements into robust technical implementations.
- **Executed** rigorous testing and optimization strategies to ensure maximum application reliability and peak performance.

Attra Infotech Pvt. Ltd **Jan 2018 – Oct 2018**

Senior Software Engineer

- **Architected and secured high-performance backend Apis** chitected to ensure robust data integrity and system reliability.
- **Developed and integrated Jasper Reports** into the existing application architecture, streamlining complex data reporting processes.
- **Facilitated rigorous code reviews:** to enforce high engineering standards, improve code maintainability, and ensure adherence to industry best practices.
- **Mentored team members:** Partnered by providing technical guidance and collaborative support to resolve complex development challenges and accelerate project delivery.

Lexicon Networks India Pvt. Ltd **Aug 2015 – Jan 2018**

Software Engineer

- **Full-Stack Development:** Architected and deployed scalable web applications leveraging Java, Spring Boot, Hibernate, and Angular to enhance operational efficiency.
- **Requirement Analysis:** Partnered with stakeholders to gather and translate complex business requirements into high-impact, tailored software solutions.
- **Mobile Development:** Engineered responsive hybrid mobile applications utilizing Ionic and Cordova frameworks to improve cross-platform user engagement.
- **Cross-Functional Collaboration:** Partnered with multidisciplinary teams to manage project lifecycles, ensuring the seamless integration of new features and system updates.
- **Quality Assurance & Performance:** Executed rigorous testing protocols and performance optimizations to maintain high application reliability, security, and speed.

Projects

Bond Tokenization Platform (Blockchain) **Nov 2026**

Engineered a blockchain-based bond tokenization platform, enabling custodians to tokenize off-chain assets on the Ethereum network and automate complex corporate actions, including coupon distribution. Architected a robust ecosystem for investor whitelisting, secure token distribution, and peer-to-peer trading while delivering an intuitive investor dashboard for real-time portfolio management.

Tech Stack: Solidity, Hardhat, Web3, Ethereum, ReactJS, Java, Spring Boot, Microservices, Spring Data JPA, Redis, Kafka, Spring Cloud Config, Service Discovery

Key Responsibilities

- **Smart Contract Development:** Designed and deployed secure Solidity smart contracts to manage bond tokenization, investor whitelisting, and regulatory-compliant restricted token transfers.
- **Automation Logic:** Implemented automated coupon distribution algorithms to ensure accurate, scheduled payouts to token holders.
- **Tooling & Integration:** Developed and rigorousy tested smart contracts using Hardhat; facilitated seamless integration between blockchain protocols and backend services via Web3.
- **Microservices Architecture:** Built scalable Spring Boot microservices utilizing Spring Data JPA for persistence and Redis caching to optimize data retrieval performance.
- **System Scalability:** Leveraged Spring Cloud Config for centralized configuration and service discovery, ensuring efficient inter-service communication within a distributed environment.
- **Event-Driven Infrastructure:** Orchestrated asynchronous workflows using Apache Kafka to drive event-based processes, including automated stakeholder notifications.
- **Full-Stack Development:** Developed a responsive ReactJS front end, providing custodians and investors with seamless portfolio tracking and comprehensive holdings visualization.

Digital Modernization **Oct 2026**

Architected and maintained a high-scale microservices ecosystem using **Spring Boot** to power a card tokenization platform. Led the end-to-end design, development, and testing of critical **Account Profile** and **Token Lookup** services, ensuring seamless integration with downstream systems for secure data retrieval and delivery.

Tech Stack: Java, Spring Boot, Microservices, Kafka, JUnit, Mockito, Cucumber, Pitest, Jenkins, Red Hat OpenShift (OCP)

Core Responsibilities

- **Microservices Architecture:** Engineered robust Spring Boot microservices, optimizing the management of account profiles and tokenized data interfaces.
- **Event-Driven Design:** Implemented scalable asynchronous communication protocols utilizing **Apache Kafka** to facilitate real-time data exchange across distributed services.
- **Quality Assurance & Testing:** Championed software reliability by developing comprehensive unit testing suites with **JUnit** and **Mockito**.
- **Test Automation:** Advanced the BDD lifecycle by implementing **Cucumber** for API test automation and conducting rigorous integration testing for end-to-end service validation.
- **Mutation Testing:** Enhanced test suite efficacy and code quality through systematic mutation testing using **Pitest**.
- **Cloud Infrastructure:** Deployed and orchestrated containerized services within the **Red Hat OpenShift (OCP)** environment.
- **CI/CD Optimization:** Streamlined software delivery by managing and monitoring automated **Jenkins** pipelines.

Debit Card Management System **Jan 2026**

System Overview: Designed and managed a comprehensive platform for institutional onboarding and end-to-end debit card lifecycle management. Oversaw operations including card generation, embossing file creation, data maintenance, virtual card support, and high-volume batch processing.

Tech Stack: ReactJs, Java, Spring Boot, Microservices, Kafka, Redis, Jenkins, Spring Batch, Event Driven, Oracle, PostgreSQL, Spring Data JPA, Mockito, Agile Methodology

Key Responsibilities:

- **Technical Leadership:** Served as the Technical Lead, guiding the team through complex software development lifecycles and architectural decision-making.
- **System Development:** Spearheaded the end-to-end development, optimization, and maintenance of the core debit card management platform.
- **Requirements Engineering:** Collaborated with stakeholders for requirement gathering and feature grooming to align technical output with business objectives.
- **Quality Assurance:** Enforced rigorous code review standards and best practices to ensure high-performance, maintainable, and scalable code.
- **Strategic Problem Solving:** Architected innovative technical solutions and proposed advanced approaches to resolve complex business use cases.
- **Mentorship:** Provided hands-on technical guidance and support to team members, fostering a collaborative environment to overcome complex development challenges.

Certifications

Certified Blockchain Architect - Certificate

This certification has strengthened my understanding of:

- Blockchain architecture and design principles
- Distributed Ledger Technology (DLT)
- Consensus mechanisms
- Smart contracts and decentralized applications (dApps)
- Enterprise blockchain use cases
- Security, scalability, and governance considerations
